USE CASES

1 SCREENING FOR SITES FOR SOLAR PROJECTS

Using satellite derived data we can provide developers estimated revenue screenings maps. This helps developers look for potential sites based on more than 30 years of weather data.

2 MAINTENANCE STRATEGY

Stopping a wind turbine for maintenance can be a costly affair. Using our electricity price and production forecasts. Optimal windows for maintenance can be planned ahead for optimal operation

3 REVENUE INVESTIGATION

Investors looking to investigate revenue of projects can use our quick to access revenue forecasts. This can also provide a transparent and impartial discussion point. .

4 LOOKING FOR DATA?

With our services customers can get quick and easy access to high quality historical data. The data covers the entirety of Europe and historically goes back to 1985.

5 ENVIRONMENTAL ASSESEMENT

How much CO2 are you saving the earth from with your renewable power. With our simulations of the energy systems we provide you with what power you are substituting and how much greenhouse gas that corresponds to
